

is dioptric or by lenses, of the 4th order. The lighthouse is iron, and painted black.

The Voloiskaia light is elevated 69 feet, and visible between the bearings of N.W. by W.  $\frac{1}{2}$  W. and W. by N.  $\frac{1}{2}$  N., its limits passing a cable from the sandbanks bordering the elbows of the Russkaia and Voloiskaia Spits. The illuminating apparatus is dioptric or by lenses, of the 4th order. The light is shown from a window at the angle of a house, in lat.  $46^{\circ} 44' 30''$  N., long.  $31^{\circ} 53' 40''$  East of Greenwich.

Vessels entering the Búg should keep within the limits of Sviatotoitski light until Voloiskaia light is seen; they will thus avoid the banks extending from both sides the river. By keeping within the limits of the latter light, they will avoid the Russkaia and Voloiskaia Spits.
