

the whole of such coins, and that, therefore, they were within the prescribed remedy as to Weight. We then melted the said Silver coins, so taken out and weighed, into an ingot, and assayed such ingot, comparing it with the standard Silver Trial Plate produced by the Board of Trade, so as to ascertain whether the metal was within the remedy as to fineness prescribed in the said First Schedule to the said Act, and we found that the amount of variation from the Standard of Fineness specified in the said First Schedule to the said Act was minus three ten-thousandths (or .0003), and that, therefore, the said metal was within the prescribed remedy as to fineness. We weighed the residue of the said Silver coins in bulk, and we ascertained that they were within the remedy as to Weight. We then took from such residue one Crown, one Half-Crown, one Florin, one Shilling, one Sixpence, and one Threepence, and weighed and assayed them separately, and we found that such Crown weighed 436.07 grains, that such Half-Crown weighed 218.47 grains, that such Florin weighed 174.40 grains, that such Shilling weighed 87.05 grains, that such Sixpence weighed 43.67 grains, and that such Threepence weighed 21.54 grains. We then assayed the said Crown, the said Half-Crown, the said Florin, the said Shilling, the said Sixpence, and the said Threepence separately, and we found the millesimal fineness of such Crown to be 924.3, of such Half-Crown to be 925.9, of such Florin to be 925.0, of such Shilling to be 925.2, of such Sixpence to be 924.6, and of such Threepence to be 925.2.
