

QUESTION

1. A person is standing on a platform. A train is moving towards him. The person starts clapping his hands. The sound of the clapping is heard by the person on the platform and also by the person on the train. The person on the train hears the sound of the clapping later than the person on the platform. Why?

ANSWER

The sound of the clapping travels through the air. The person on the platform is closer to the source of the sound than the person on the train. Therefore, the sound reaches the person on the platform first and then reaches the person on the train.

QUESTION

2. A person is standing on a platform. A train is moving towards him. The person starts clapping his hands. The sound of the clapping is heard by the person on the platform and also by the person on the train. The person on the train hears the sound of the clapping later than the person on the platform. Why?

ANSWER

The sound of the clapping travels through the air. The person on the platform is closer to the source of the sound than the person on the train. Therefore, the sound reaches the person on the platform first and then reaches the person on the train.
