1. The maximum flow to full treatment will be 16,675 cubic metres per day. The primary treated wastewater will discharge from the existing long sea outfall at National Grid Reference TR1415 6953.
2. When the flow to full treatment exceeds 193 litres per second a discharge of preliminary treated storm sewage effluent will be permitted from the existing long sea outfall at National Grid Reference TR14156953 up to a maximum of 760 litres per second.

This scheme has been proposed to meet the requirements of the EC Urban Waste Water Treatment Directive (91/271/EEC) and to provide primary treatment in order to achieve a significant improvement in effluent quality resulting in a substantial reduction in pollutant loadings to the North Sea.

Storm flow in excess of 760 litres per second will continue, as currently consented, to be diverted to flood balancing tanks and subsequently discharged from the existing storm outfall at National Grid Reference TR 1350 6815.
